Assistant Professor of Chemistry

Job Details

**Job Location**: Main Campus - SAN RAFAEL, CA  
**Position Type**: Full Time  
**Job Shift**: Day

Position Summary

The Department of Natural Sciences and Mathematics at Dominican University of California invites outstanding applicants for one full-time, tenure-track Assistant Professor in the field of analytical chemistry or biochemistry with a preferred focus in environmental or biological applications. The successful candidate is expected to teach chemistry courses and demonstrate excellence in teaching, develop a strong research program supported by extramural funding involving undergraduate students and potentially masters students, and establish cross-disciplinary collaborations both inside and outside the University.

Responsibilities

- Teach chemistry or biochemistry courses at the undergraduate level
- Attend and contribute to faculty meetings and other professional development activities
- Participate in curriculum development for individual courses and overall program
- Evaluate and grade student work and provide feedback to students
- Mentor and advise students on the progress of their projects, coursework, and career development
- Uphold academic performance standards and integrity
- Direct undergraduate research projects that produce publishable results

Required Qualifications

- PhD
- Postdoctoral experience

Additional Position Information

- Priority will be given to applications submitted by December 1, 2021; however, additional applications may be considered until the position is filled
- Must be willing to consent to a background check
