### **Job Description**

The Oakland University William Beaumont School of Medicine is seeking applicants to fill a tenure-track position at the Assistant Professor level in biochemistry. In particular, we seek an individual that can provide instruction in biochemistry in various medical education settings to a diverse student population. The School of Medicine recognizes outstanding, innovative teaching and scholarship as the basis for advancement.

The successful candidate will work with an interdisciplinary team of clinicians and faculty to teach, develop, implement, evaluate and disseminate scholarship in medical education and related fields.

#### **General Responsibilities:**

1. Provide instruction in biochemistry in a culturally diverse environment in various settings including the classroom, clinical sites, laboratory, as well as computer-based and other distance-learning delivery systems. Generate curricular materials for instructional activities. Coordinate and integrate instructional activities and curricular materials while working professionally and effectively with other faculty in order to enhance the learning experience for students.
2. Establish learning objectives and competency standards for undergraduate medical students. Contribute to the process of student assessment, and development, implementation and evaluation of assessment materials and procedures. Develop and implement effective remediation processes for students identified as performing below established competency standards.
3. Use and promote best practices in education. Provide mentoring, training and support for other faculty in order to improve instruction across the curriculum and encourage adoption of improved instructional techniques by our faculty.
4. Maintain and improve competence in subject content and instructional methodology through participation in faculty development activities and self-directed learning.
5. Assist, evaluate, advise and mentor medical students regarding academic, curricular and career matters.
6. Participate in scholarly activity, creating and adding to knowledge in the field and teaching of Biochemistry. Submit scholarly work for open dissemination and professional peer review. Seek extramural funding to support scholarly activities. Scholarly activities may include the advancement of new theories and principles, expansion and interpretation of existing ideas, or improvement and application of knowledge, especially in innovative educational environments.
7. Perform administrative duties, such as course director or discipline director, as negotiated and assigned.

Additionally, candidates must have:

- A. A commitment to advancing a culture and climate of diversity and inclusion and serving a diverse population.
- B. Evidence of the ability or strong potential to provide effective teaching to medical or health science students.
- C. The ability to demonstrate potential for scholarly and creative activity that would merit appointment in a basic science department.
- D. A commitment to serving on departmental, school and university committees.

A terminal degree in an appropriate and applicable field.
